

Table B.3 Replication

Angie Wang

July 2026

Dependent Variable: % Log-excess return of CRSP portfolio index						
Portfolio:	Value Weighted	Equal Weighted	1st Decile	2nd Decile	3rd Decile	4th Decile
FOMC dummy	TBD [tbd]	TBD [tbd]	0.21 [0.08]**	0.43 [0.13]***	0.44 [0.12]***	0.46 [0.12]***
Constant	TBD [tbd]	TBD [tbd]	0.03 [0.02]	0.02 [0.02]	0.02 [0.02]	0.01 [0.02]
Annual ex-return FOMC	TBD	TBD	1.91	3.60	3.60	3.76
Annual ex-return non-FOMC	TBD	TBD	6.32	4.23	3.82	2.68
FOMC Sharpe Ratio	TBD	TBD	0.72	0.87	0.93	0.98
Portfolio:	5th Decile	6th Decile	7th Decile	8th Decile	9th Decile	10th Decile
FOMC dummy	0.49 [0.12]***	0.42 [0.11]***	0.40 [0.10]***	0.40 [0.11]***	0.39 [0.10]***	0.31 [0.10]***
Constant	0.01 [0.02]	0.01 [0.02]	0.02 [0.02]	0.01 [0.02]	0.02 [0.02]	0.02 [0.02]
Annual ex-return FOMC	3.97	3.44	3.36	3.31	3.21	2.54
Annual ex-return non-FOMC	2.62	3.40	4.61	3.41	4.81	1.92
FOMC Sharpe Ratio	1.08	1.02	1.04	0.99	0.99	0.80

Table B.3. CRSP Size Portfolio Regressions: 1994–2011. This table provides results for a FOMC dummy variable regression of different weighted U.S. equity portfolios over the sample period from September 1, 1994 through March 30, 2011. The dependent variable is daily percent log-excess returns, and portfolios include value-weighted and equal weighted portfolios from CRSP as well as the ten decile size portfolios from Ken French’s online data library. “FOMC dummy” is 1 on days with a FOMC meeting and 0 otherwise. “Annual ex-return FOMC” is the average cumulative annual excess return on FOMC days, and “Annual ex-return non-FOMC” is the average cumulative annual return on non-FOMC days in the sample. “FOMC Sharpe Ratio” is the annualized Sharpe ratio on pre-FOMC returns. Slight differences in values may be due to CRSP revisions and changes in French’s daily portfolio methodology. *** significant at 1%, ** significant at 5%, * significant at 10%. HC1 robust standard errors shown in brackets.
